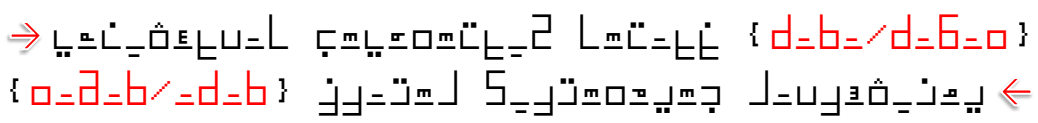
Universal Geometric Letters {Taha/Taham} - (*Sounds and Movements*)



The writing geometric method {Taha} uses separate geometric consonant letters and horizontal short **movements** or **vertical long movements (Vowels),** called **Mudood** in Quran, which are written above or below the phonetic letters or above a **Waslah**.

The Arabic geometric letters "**Alif, Waw, and Yaa"** have nothing to do with vowels and are not used as carriers for the Hamzah. **Hamzatu -lwasl** is just written as a **Waslah**.

An Arabic letter with a **stress** is written as two letters, the first one is a static consonant letter and the second one is a dynamic consonant letter. The Arabic letter with **Tanween** is written as a vowel (a movement from the same type) followed by a static letter **N**.

Writing Arabic way {wAw} matches the letters of other languages, such as Latin, with the **Reversed Geometric letters {Taham)**, and converts them into phonetic languages by using phonetic letters and movements to launch sounds from the mouth or the nose.
